

## CLAIMS

1. A watch face with selective backgrounds comprising:
  - a polarizer layer for polarizing light passing therethrough;
  - a liquid crystal display disposed beneath the polarizer layer wherein the liquid crystal display selectively rotates or does not rotate polarized light;
  - a reflective polarizer layer located beneath the liquid crystal display and positioned in a first orientation relative to said polarizer layer, wherein rotated light reflects off the reflective polarizer layer producing a first background on the watch face and non-rotated light is transmitted through the reflective polarizer layer; and
  - a reflective layer disposed beneath the reflective polarizer layer wherein the light passed through the reflective polarizer layer reflects off the reflective layer producing a second background on the watch face.
2. The watch face of claim 1 wherein the polarizer layer comprises a neutral polarizer.
3. The watch face of claim 1 wherein the polarizer layer comprises a colored polarizer.
4. The watch face of claim 1 wherein the liquid crystal display is a twisted nematic liquid crystal display.
5. The watch face of claim 1 wherein the liquid crystal display is an electronically controlled birefringence liquid crystal display.
6. The watch face of claim 1 wherein the reflective polarizer layer is positioned in a second orientation relative to said polarizer layer, wherein non-rotated light reflects off the reflective polarizer layer producing the first background on the watch face and rotated light is transmitted through the reflective polarizer layer.

1 21. The watch face of claim 1 further comprising voltage switching means, wherein  
2 said switching means controls a voltage applied to said liquid crystal display.

1 22. The watch face of claim 22 wherein said voltage switching means is electronically  
2 actuated.

1 23. The watch face of claim 22 wherein said voltage switching means is manually  
2 actuated.

1 24. The watch face of claim 22 wherein said voltage switching means alternates  
2 between a first and a second voltage.

1 25. The watch face of claim 24 wherein said first voltage produces the first  
2 background and said second voltage produces the second background.

1 26. The watch face of claim 25 further comprising means for adjusting said second  
2 voltage.

1 27. The watch face of claim 27 where in means for adjusting is electronically  
2 actuated.

1 28. The watch face of claim 27 where in means for adjusting is manually actuated.  
1

1 29. A watch face with selective backgrounds comprising:

2 a polarizer layer for polarizing light passing therethrough;

3 a liquid crystal display disposed beneath the polarizer layer wherein the  
4 liquid crystal display is divided into a plurality of distinct segments,  
5 wherein each segment selectively rotates or does not rotate polarized  
6 light;

7 a reflective polarizer layer located beneath the liquid crystal display and  
8 positioned in a first orientation relative to said polarizer layer, wherein  
9 rotated light reflects off the reflective polarizer layer producing a first  
10 background on the watch face and non-rotated light is transmitted  
11 through the reflective polarizer layer; and

12 a reflective layer disposed beneath the reflective polarizer layer wherein  
13 the light passed through the reflective polarizer layer reflects off the  
14 reflective layer producing a second background on the watch face.

1 30. The watch face of claim 29 wherein said plurality of distinct segments comprise a  
2 digital time display.

1 31. The watch face of claim 29 wherein the polarizer layer comprises a neutral  
2 polarizer.

1 32. The watch face of claim 29 wherein the polarizer layer comprises a colored  
2 polarizer.

1 33. The watch face of claim 29 wherein the liquid crystal display is a twisted nematic  
2 liquid crystal display.

1 34. The watch face of claim 29 wherein the liquid crystal display is an electronically  
2 controlled birefringence liquid crystal display.

- 1 35. The watch face of claim 29 wherein the reflective polarizer layer is positioned in a  
2 second orientation relative to said polarizer layer, wherein non-rotated light reflects off  
3 the reflective polarizer layer producing the first background on the watch face and rotated  
4 light is transmitted through the reflective polarizer layer.
- 1 36. The watch face of claim 29 wherein the reflective layer is a patterned surface.
- 1 37. The watch face of claim 29 wherein the reflective layer is a colored surface.
- 1 38. The watch face of claim 29 wherein the reflective layer is a colored surface.
- 1 39. The watch face of claim 29 wherein the reflective layer is a mirrored surface.
- 1 40. The watch face of claim 36 wherein the patterned surface is an analog clock face.
- 1 41. The watch face of claim 29 wherein the first and second background are colored.
- 1 42. The watch face of claim 29 wherein the first background is a first color and the  
2 second background is a second color.
- 1 43. The watch face of claim 29 wherein the first background is a silvered mirror.
- 1 44. The watch face of claim 29 further comprising a color changing layer disposed  
2 directly above or directly below the liquid crystal display.
- 1 45. The watch face of claim 44 wherein the color changing layer comprises a colored  
2 polarizer.
- 1 46. The watch face of claim 44 wherein the color changing layer comprises a  
2 retardation film.
- 1 47. The watch face of claim 29 wherein the watch face facilitates analog or digital  
2 time display.
- 1 48. The watch face of claim 29 wherein the watch face includes a hole extending  
2 axially therethrough to provide for analog time movement of watch hands.

1 49. The watch face of claim 29 wherein the watch face is disposed within a watch  
2 module.

1 50. The watch module of claim 29 wherein said module is round and said watch face  
2 is octagonal.

1 51. The watch face of claim 29 further comprising a voltage switching means,  
2 wherein said voltage switching means controls a voltage selectively applied to at least  
3 one of a plurality of segment patterns, wherein each pattern is comprised of at least one  
4 of the plurality of distinct segments.

1 52. The watch face of claim 51 wherein said voltage switching means alternates the  
2 voltage between a first voltage and a second voltage.

1 53. The watch face of claim 52 wherein said first voltage causes each distinct  
2 segment in the at least one of said plurality of segment patterns to rotate polarized light  
3 and said second voltage causes each distinct segment in the at least one of said plurality  
4 of segment patterns to not rotate polarized light.

1 54. The watch face of claim 51 wherein said voltage switching means is electronically  
2 actuated.

1 55. The watch face of claim 51 wherein said voltage switching means is manually  
2 actuated.

1 56. The watch face of claim 52 further comprising means for adjusting said second  
2 voltage.

1 57. The watch face of claim 56 where in means for adjusting is electronically  
2 actuated.

1 58. The watch face of claim 56 where in means for adjusting is manually actuated.

1 59. The watch face of claim 51 further comprising a pattern selection means, wherein  
2 said selecting means controls the selection of at least one of the plurality of patterns.

1 60. The watch face of claim 59 wherein said pattern selection means is electronically  
2 actuated.

1 61. The watch face of claim 59 wherein said pattern selection means is manually  
2 actuated.

Patent Application

- 1 62. A watch face with selective backgrounds comprising:  
2 a polarizer layer for polarizing light passing therethrough;  
3 a first liquid crystal display disposed beneath the polarizer layer wherein  
4 the first liquid crystal display is divided into a plurality of distinct  
5 segments, wherein each segment selectively rotates or does not rotate  
6 polarized light;  
7 a second liquid crystal display disposed beneath the first liquid crystal  
8 display, wherein the second liquid crystal display selectively rotates or  
9 does not rotate polarized light;  
10 a reflective polarizer layer located beneath the second liquid crystal  
11 display and positioned in a first orientation relative to said polarizer  
12 layer, wherein rotated light reflects off the reflective polarizer layer  
13 producing a first background on the watch face and non-rotated light is  
14 transmitted through the reflective polarizer layer; and  
15 a reflective layer disposed beneath the reflective polarizer layer wherein  
16 the light passed through the reflective polarizer layer reflects off the  
17 reflective layer producing a second background on the watch face.
- 1 63. The watch face of claim 62 wherein said plurality of distinct segments in the first  
2 liquid crystal display comprise a digital time display.
- 1 64. The watch face of claim 62 wherein the polarizer layer comprises a neutral  
2 polarizer.
- 1 65. The watch face of claim 62 wherein the polarizer layer comprises a colored  
2 polarizer.
- 1 66. The watch face of claim 62 wherein the liquid crystal displays are twisted nematic  
2 type liquid crystal displays.

Sheet 2 of 3

1 67. The watch face of claim 62 wherein the liquid crystal displays are electronically  
2 controlled birefringence liquid crystal displays.

1 68. The watch face of claim 62 wherein the reflective polarizer layer is positioned in a  
2 second orientation relative to said polarizer layer, wherein non-rotated light reflects off  
3 the reflective polarizer layer producing a first background on the watch face and rotated  
4 light is transmitted through the reflective polarizer layer.

1 69. The watch face of claim 62 wherein the reflective layer is a patterned surface.

1 70. The watch face of claim 62 wherein the reflective layer is a colored surface.

1 71. The watch face of claim 69 wherein the reflective layer is a colored surface.

1 72. The watch face of claim 62 wherein the reflective layer is a mirrored surface.

1 73. The watch face of claim 69 wherein the patterned surface is an analog clock face.

1 74. The watch face of claim 62 wherein the first and second background are colored.

1 75. The watch face of claim 62 wherein the first background is a first color and the  
2 second background is a second color.

1 76. The watch face of claim 62 wherein the first background is a silvered mirror.

1 77. The watch face of claim 62 further comprising a color changing layer disposed  
2 directly above or directly below either of the liquid crystal displays.

1 78. The watch face of claim 77 wherein the coloring lay changing comprises a  
2 colored polarizer.

1 79. The watch face of claim 77 wherein the color changing layer comprises a  
2 retardation film.

1 80. The watch face of claim 62 wherein said watch face includes a hole extending  
2 axially therethrough to provide for movement of analog time watch hands.

1 81. The watch face of claim 62 wherein said watch face is disposed within a watch  
2 module.

1 82. The watch module of claim 81 wherein said module is round and said watch face  
2 is octagonal.

1 83. The watch face of claim 62 further comprising voltage switching means, wherein  
2 said switching means controls a primary voltage selectively applied to at least one of a  
3 plurality of segment patterns, wherein each pattern is comprised of at least one of the  
4 plurality of distinct segments in the first liquid crystal display, and a secondary voltage  
5 applied to said second liquid crystal display.

1 84. The watch face of claim 83 wherein said voltage switching means is electronically  
2 actuated.

1 85. The watch face of claim 83 wherein said voltage switching means is manually  
2 actuated.

1 86. The watch face of claim 83 wherein said voltage switching means alternates the  
2 primary voltage between a first and a second voltage, and the secondary voltage between  
3 a third and a fourth voltage.

1 87. The watch face of claim 86 wherein said first voltage causes each distinct  
2 segment in the at least one of said plurality segment patterns to rotate polarized light and  
3 said second voltage causes each distinct segment in the at least one of said plurality  
4 segment patterns to not rotate polarized light, and wherein said third voltage causes the  
5 second liquid display to rotate polarized light and said fourth voltage causes the second  
6 liquid display to not rotate polarized light.

1 88. The watch face of claim 86 wherein said third voltage produces the first  
2 background and said fourth voltage produces the second background.

1 89. The watch face of claim 86 further comprising means for adjusting said primary  
2 and secondary voltages.

1 90. The watch face of claim 89 where in means for adjusting is electronically  
2 actuated.

1 91. The watch face of claim 89 wherein means for adjusting is manually actuated.

1 92. The watch face of claim 83 further comprising a pattern selection means, wherein  
2 said selection means controls and selects the at least one of said plurality of segment  
3 patterns.

1 93. The watch face of claim 92 wherein said pattern selection means is electronically  
2 actuated.

1 94. The watch face of claim 92 wherein said pattern selection means is manually  
2 actuated.

2013-04-23 14:23:04

- 1 95. A watch face with selective backgrounds comprising:
- 2 a polarizer layer for polarizing light passing therethrough;
- 3 a first liquid crystal display disposed beneath the polarizer layer wherein
- 4 the first liquid crystal display selectively rotates or does not rotate
- 5 polarized light;
- 6 a second liquid crystal display disposed beneath the first liquid crystal
- 7 display, wherein the second liquid crystal display is divided into a
- 8 plurality of distinct segments, wherein each segment selectively rotates
- 9 or does not rotate polarized light;
- 10 a reflective polarizer layer located beneath the second liquid crystal
- 11 display and positioned in a first orientation relative to said polarizer
- 12 layer, wherein rotated light reflects off the reflective polarizer layer
- 13 producing a first background on the watch face and non-rotated light is
- 14 transmitted through the reflective polarizer layer; and
- 15 a reflective layer disposed beneath the reflective polarizer layer wherein
- 16 the light passed through the reflective polarizer layer reflects off the
- 17 reflective layer producing a second background on the watch face.
- 1 96. The watch face of claim 95 wherein said plurality of distinct segments in the
- 2 second liquid crystal display comprise a digital time display.
- 1 97. The watch face of claim 95 wherein the polarizer layer comprises a neutral
- 2 polarizer.
- 1 98. The watch face of claim 95 wherein the polarizer layer comprises a colored
- 2 polarizer.
- 1 99. The watch face of claim 95 wherein the liquid crystal displays are twisted nematic
- 2 type liquid crystal displays.

1 100. The watch face of claim 95 wherein the liquid crystal displays are electronically  
2 controlled birefringence liquid crystal displays.

1 101. The watch face of claim 95 wherein the reflective polarizer layer is positioned in a  
2 second orientation relative to said polarizer layer, wherein non-rotated light reflects off  
3 the reflective polarizer layer producing a first background on the watch face and rotated  
4 light is transmitted through the reflective polarizer layer.

1 102. The watch face of claim 95 wherein the reflective layer is a patterned surface.

1 103. The watch face of claim 95 wherein the reflective layer is a colored surface.

1 104. The watch face of claim 95 wherein the reflective layer is a colored surface.

1 105. The watch face of claim 95 wherein the reflective layer is a mirrored surface.

1 106. The watch face of claim 102 wherein the patterned surface is an analog clock  
2 face.

1 107. The watch face of claim 95 wherein the first and second background are colored.

1 108. The watch face of claim 95 wherein the first background is a first color and the  
2 second background is a second color.

1 109. The watch face of claim 95 wherein the first background is a silvered mirror.

1 110. The watch face of claim 95 further comprising a color changing layer disposed  
2 directly above or directly below either of the liquid crystal displays.

1 111. The watch face of claim 110 wherein the coloring lay changing comprises a  
2 colored polarizer.

1 112. The watch face of claim 110 wherein the color changing layer comprises a  
2 retardation film.

1 113. The watch face of claim 95 wherein said watch face includes a hole extending  
2 axially therethrough to provide for movement of analog time watch hands.

1 114. The watch face of claim 95 wherein said watch face is disposed within a watch  
2 module.

1 115. The watch module of claim 114 wherein said module is round and said watch face  
2 is octagonal.

1 116. The watch face of claim 95 further comprising voltage switching means, wherein  
2 said switching means controls a primary voltage selectively applied to at least one of a  
3 plurality of segment patterns, wherein each pattern is comprised of at least one of the  
4 plurality of distinct segments in the second liquid crystal display, and a secondary voltage  
5 applied to said first liquid crystal display.

1 117. The watch face of claim 116 wherein said voltage switching means is  
2 electronically actuated.

1 118. The watch face of claim 116 wherein said voltage switching means is manually  
2 actuated.

1 119. The watch face of claim 116 wherein said voltage switching means alternates the  
2 primary voltage between a first and a second voltage, and the secondary voltage between  
3 a third and a fourth voltage.

1 120. The watch face of claim 119 wherein said first voltage causes each distinct  
2 segment in the at least one of said plurality segment patterns to rotate polarized light and  
3 said second voltage causes each distinct segment in the at least one of said plurality  
4 segment patterns to not rotate polarized light, and wherein said third voltage causes the  
5 second liquid display to rotate polarized light and said fourth voltage causes the second  
6 liquid display to not rotate polarized light.

1 121. The watch face of claim 119 wherein said third voltage produces the first  
2 background and said fourth voltage produces the second background.

1 122. The watch face of claim 119 further comprising means for adjusting said primary  
2 and secondary voltages.

1 123. The watch face of claim 122 where in means for adjusting is electronically  
2 actuated.

1 124. The watch face of claim 122 wherein means for adjusting is manually actuated.

1 125. The watch face of claim 116 further comprising a pattern selection means,  
2 wherein said selection means controls and selects the at least one of said plurality of  
3 segment patterns.

1 126. The watch face of claim 125 wherein said pattern selection means is electronically  
2 actuated.

1 127. The watch face of claim 125 wherein said pattern selection means is manually  
2 actuated.

1 128. A watch face with selective backgrounds comprising:  
2 a polarizer layer for polarizing light passing therethrough;  
3 a first liquid crystal display disposed beneath the polarizer layer wherein  
4 the first liquid crystal display is divided into a first plurality of distinct  
5 segments, wherein each segment selectively rotates or does not rotate  
6 polarized light;  
7 a second liquid crystal display disposed beneath the first liquid crystal  
8 display, wherein the second liquid crystal display is divided into a  
9 second plurality of distinct segments, wherein each segment  
10 selectively rotates or does not rotate polarized light;  
11 a reflective polarizer layer located beneath the second liquid crystal  
12 display and positioned in a first orientation relative to said polarizer  
13 layer, wherein rotated light reflects off the reflective polarizer layer  
14 producing a first background on the watch face and non-rotated light is  
15 transmitted through the reflective polarizer layer; and  
16 a reflective layer disposed beneath the reflective polarizer layer wherein  
17 the light passed through the reflective polarizer layer reflects off the  
18 reflective layer producing a second background on the watch face.

1 129. The watch face of claim 128 wherein said first plurality of distinct segments in the  
2 first liquid crystal display comprise a digital time display.

1 130. The watch face of claim 128 wherein said second plurality of distinct segments in  
2 the second liquid crystal display comprise a digital time display.

1 131. The watch face of claim 128 wherein said first and second pluralities of distinct  
2 segments in the first and second liquid crystal displays each comprise a digital time  
3 display.

1 132. The watch face of claim 131 wherein said digital time displays complement one  
2 another.

1 133. The watch face of claim 128 wherein said first plurality of distinct segments in the  
2 first liquid crystal display comprise a digital character display.

1 134. The watch face of claim 133 wherein said first and second pluralities of distinct  
2 segments in the first and second liquid crystal displays each comprise a digital character  
3 display.

1 135. The watch face of claim 134 wherein said digital character displays complement  
2 one another.

1 136. The watch face of claim 128 wherein the polarizer layer comprises a neutral  
2 polarizer.

1 137. The watch face of claim 128 wherein the polarizer layer comprises a colored  
2 polarizer.

1 138. The watch face of claim 128 wherein the liquid crystal display is a twisted  
2 nematic liquid crystal display.

1 139. The watch face of claim 128 wherein the liquid crystal display is an electronically  
2 controlled birefringence liquid crystal display.

1 140. The watch face of claim 128 wherein the reflective polarizer layer is positioned in  
2 a second orientation relative to said polarizer layer, wherein non-rotated light reflects off  
3 the reflective polarizer layer producing a first background on the watch face and rotated  
4 light is transmitted through the reflective polarizer layer.

1 141. The watch face of claim 128 wherein the reflective layer is a patterned surface.

1 142. The watch face of claim 128 wherein the reflective layer is a colored surface.

1 143. The watch face of claim 128 wherein the reflective layer is a colored surface.

1 144. The watch face of claim 128 wherein the reflective layer is a mirrored surface.

1 145. The watch face of claim 128 wherein the patterned surface is an analog clock  
2 face.

1 146. The watch face of claim 128 wherein the first and second background are colored.

1 147. The watch face of claim 128 wherein the first background is a first color and the  
2 second background is a second color.

1 148. The watch face of claim 147 wherein the first background is a silvered mirror.

1 149. The watch face of claim 128 further comprising a color changing layer disposed  
2 directly above the first liquid crystal display or directly below the second liquid crystal  
3 display.

1 150. The watch face of claim 149 wherein the color changing layer comprises a  
2 colored polarizer.

1 151. The watch face of claim 149 wherein the color changing layer comprises a  
2 retardation film.

1 152. The watch face of claim 128 wherein the watch face facilitates analog or digital  
2 time display.

1 153. The watch face of claim 128 wherein the watch face includes a hole extending  
2 axially therethrough to provide for analog time movement of watch hands.

1 154. The watch face of claim 128 wherein the watch face is disposed within a watch  
2 module.

1 155. The watch module of claim 154 wherein said module is round and said watch face  
2 is octagonal.

1 156. The watch face of claim 128 further comprising voltage switching means, wherein  
2 said switching means controls a primary voltage selectively applied to at least one of a  
3 first plurality of segment patterns, wherein each pattern is comprised of at least one of the

4 plurality of distinct segments in the first liquid crystal display, and a secondary voltage  
5 selectively applied to at least one of a second plurality of segment patterns, wherein each  
6 pattern is comprised of at least one of the plurality of distinct segments in the second  
7 liquid crystal display.

1 157. The watch face of claim 156 wherein said voltage switching means is  
2 electronically actuated.

1 158. The watch face of claim 156 wherein said voltage switching means is manually  
2 actuated.

1 159. The watch face of claim 156 wherein said voltage switching means alternates the  
2 primary voltage between a first and a second voltage, and the secondary voltage between  
3 a third and a fourth voltage.

1 160. The watch face of claim 159 wherein said first voltage causes each distinct  
2 segment in the at least one of said first plurality of segment patterns to rotate polarized  
3 light and said second voltage causes each distinct segment in the at least one of said  
4 second plurality of segment patterns to not rotate polarized light, and wherein said third  
5 voltage causes the each distinct segment in the at least one of said second plurality of  
6 segment patterns to rotate polarized light and said fourth voltage causes each distinct  
7 segment in the at least one of said fourth plurality of segment patterns to not rotate  
8 polarized light.

1 161. The watch face of claim 159 wherein said third voltage produces the first  
2 background and said fourth voltage produces the second background.

1 162. The watch face of claim 159 further comprising means for adjusting said primary  
2 and secondary voltages.

1 163. The watch face of claim 162 where in means for adjusting is electronically  
2 actuated.

1 164. The watch face of claim 162 wherein means for adjusting is manually actuated.

1 165. The watch face of claim 156 further comprising a pattern selection means, wherein  
2 said selection means controls and selects the at least one of each said pluralities of  
3 segment patterns.

1 166. The watch face of claim 165 wherein said pattern selection means is electronically  
2 actuated.

1 167. The watch face of claim 165 wherein said pattern selection means is manually  
2 actuated.

1 168. The watch comprising:

2 a watch case comprising within a display unit and two batteries, wherein  
3 said batteries are positioned alongside said unit.

1 169. The watch of claim 168, further comprising an analog watch movement.

1 170. The watch of claim 168, wherein said display unit comprises a printed circuit  
2 board and a liquid crystal display.

1 171. The watch of claim 170, further comprising an analog watch movement.

1 172. The watch of claim 168, wherein said batteries are 1.5 volt silver oxide batteries.

1 173. The watch of claim 168 wherein said display unit includes a hole extending  
2 axially therethrough to provide for movement of analog time watch hands.
